

Lean Sustainability: Integrating Lean and Green

Friday, February 27, 2009
8:00 am - 5:00 pm

Wondering what Lean and Green is all about? Join us for this one-day hands-on introduction to Lean concepts and how these concepts can be applied sustainable production activity.

Typical Participants

Facility managers Small business owners Educators
Lean champions, green/sustainability/energy usage champions
Employees interested in improving their company's profitability

Course Overview and Learning Objectives

This workshop will introduce participants to lean and green concepts and allow them to experience the benefits of applying these concepts firsthand via a hands-on simulation. Participants will leave the workshop with an introductory level understanding of:

- 1) the fundamental concepts of the lean philosophy,
- 2) the growing trend toward sustainable manufacturing,
- 3) how these two concepts can be effectively integrated, and
- 4) the benefits that accrue to companies that employ them.

Participants will also gain a better understanding of why it is important that they learn to apply the concepts in their own businesses to gain and maintain a competitive edge.

Instructors:

Dr. Kingsley Reeves, Jr has both an MBA and Ph.D. in Industrial and Operations Engineering from the University of Michigan. He is an assistant professor of Industrial and Management Systems Engineering at USF. He specializes in the creation of value across the extended supply chain.

Demensio Barton has Bachelor's and Master's Degrees in Chemical Engineering from USF and is a licensed General Contractor in Florida. He is the founder of Essential Rating LLC, a Florida-based Energy Efficiency and Green Services company.

Cost: \$600 per attendee. (Includes lunch, breaks, and a copy of "The Toyota Way")
