FANUC: Aligning Skills Between Industry & Education

Discover how College of Central Florida is preparing students for careers in advanced manufacturing through industrial robotics and automation education programs.

FANUC

The need for skilled workers with automation training and certifications continues to grow. Please join us for a lively discussion with industry leaders about how automation is changing the landscape of the manufacturing sector.

Now, employers and schools can leverage world-class robotics and CNC technologies and educational programs to deliver hands-on, skills-based learning, preparing the future manufacturing workforce to succeed in high-wage, high-demand automation careers.

Hear from industry experts, including Roxanna Storms, Applications Engineer from Lockheed Martin, about the challenges facing the manufacturing sector and the opportunities that funding and educational programs can offer employers, workers and students. This event is open to K-12 educators, post-secondary educators, and employers. There is no cost to attend, and lunch will be provided.
